### About me

I want to help develop a product that society needs in a large team. In my life I try to improve the quality of everything around me, not just software :) This is how I satisfy my inner perfectionist. In the future, I see myself as a QA automatisisation engineer- I know the Java programming language well.

I know the HTTP(S) and SHH protocols and know how to use the browser console. Worked with Jira and Confluence. I can test the API in Postman and the mobile app in Android Studio, remove logs in ADB.

Now I live in Kazakhstan, but I am considering remote work options both here and in Russia and other countries!
